

Flower Cut and Color

Flower Cut and Color (makes 1)

1. Print out on stiff paper, color first, then cut out pieces.
2. Fold stem in half and glue to back of one of flower pieces. (You may wish to glue a popsicle stick in the middle of the stem piece for support.)
3. Glue other flower piece on top.
4. Glue leaves back to back with stem in between.

for Craft Foam Flowers follow these directions:

1. Cut out one flower, one leaf, and one rectangle from the paper pattern.
2. For each finished flower, trace and cut out one flower piece and its mirror image, one or more leaves and one rectangle from matching or contrasting craft foam. I use a ballpoint pen for tracing and then cut the markings off or make sure they face the inside of the flower sandwich when you glue it together.
3. Cut out the center of only one of the flowers.
4. Take the rectangle and cut slits along one long edge leaving 1/4 inch intact along the opposite long edge.
5. Roll the rectangle up gluing along the edge. It should now fit with a little stuffing into the hole in the center of the flower piece. Push through about 1/4 inch or less (just enough to poke a bamboo skewer through).
6. Paint or magic marker a bamboo skewer green. Push the point through the corner of a leaf and then up through the end of the rolled up rectangle you just pushed through the flower.
7. Put glue on the back of your flower, including the rolled center and glue the mirror image flower on top. You may need to hold the petals for a few minutes to get the glue to stick fully.
8. Turn the flower over and gently spread out the slit edges of the rolled rectangle in the center of the flower.
9. See photos at random-charm.com for assistance.
